PROFILE

Highly motivated and dedicated Java Full-Stack Developer seeking a challenging position to utilize my technical skills and knowledge where I can leverage my passion for coding and problem-solving skills.

WORK EXPERIENCE - 2.2 YEARS

Programmer Analyst

COGNIZANT

Dec 2021-Feb 2024

Project Description – Macy's Unified Order Platform

- Macy's UOP is a platform where all the orders are being processed. Evolving customers shopping habits drives the need for building a flexible, scalable platform that adapts quickly to changing customer expectations and provide a unified shopping experience across various selling channels for big ticket, small ticket and vendor merchandise. Adapting to these shifts have been difficult and costly for Macy's as the underlying systems are rooted in legacy technologies and built as monolithic systems. To support this, Order Platform is designed and developed using micro services architecture and deployed in AWS.

Roles and responsibilities

- Worked on the Release and Shipment team, analyses and develop the new requirements assigned to me.
- Worked on a requirement called SDD along with team and also the SDD Undeliverable email flow.

PROJECTS

1. DAILY INSURANCE PORTAL

- Project Overview: The client would like to develop a Daily Insurance Portal application to store the client information, wallet and let the client purchase a daily insurance plan and process the claims through the portal to Downstream Systems.

Monolithic:

- Client Registration: User to sign up in the system with username, password, first name, last name and email address.
- Client Login: Client should be able to log in using registered username and password.
- Add Wallet Balance: Client should opt for pre-defined wallet with details like Mode (Credit card, Debit card, UPI) and amount of money.
- Purchase policy: Client should be able to select a suitable daily insurance policy and pay from wallet.
- Process Claim: Client should be able to raise a claim request with details and proof and get the amount added in the wallet.

2. Stocklisting Application

- Project Overview: The client would like to develop a Stocklisting App with third party API where users can visit the page and search for Stocks based on the Countries and can able to add to wishlist those Stocks that stocks and can able to delete those Stocks .

Microservices:

- Register
- Login
- Search Stocks
- Add to Wishlist
